Web + mobile app

Built-in store assistant

[START HERE](#)

What DukaNest is

DukaNest is a platform that gives a small business its own professional online store — a branded website with a product catalogue, cart, checkout, payments, delivery fees, order tracking and stock management — all run from one dashboard or a mobile app, with no coding and no developer.

The name says it plainly: *duka* is the shop, and DukaNest is the home you give it. Each store owner gets an address like **yourstore.dukanest.com** and a dashboard to run the whole business. Hosting, security (SSL), and updates are included in the subscription.

It is built specifically for **Kenyan sellers**: M-Pesa payments, delivery zones by location, expense and profit tracking, and a mobile-first design because most owners and shoppers are on a phone.

SAY IT LIKE THIS

DukaNest turns a WhatsApp-and-Instagram hustle into a real business with its own website — for about the price of a monthly data bundle.

[MEMORISE THESE](#)

The pitch, in three lengths

Use the version that fits the moment — a caption, a DM reply, or a proper conversation.

10 SECONDS — THE HOOK

“DukaNest gives your business its own online store, so customers browse your products and order themselves — instead of asking ‘Price?’ in your DMs all day.”

30 SECONDS – THE ELEVATOR

“If you sell on WhatsApp, Instagram, Jiji or Jumia, you already know the pain — orders lost in chats, repeating prices, arguing about delivery fees, no idea what's in stock. DukaNest gives you your own branded website where all of that is handled automatically. You add products once, share your link, and customers order and pay through your site. Every order lands in one dashboard. It starts at Ksh 1,000 a month with a free 14-day trial.”

2 MINUTES – THE FULL STORY

Open with their pain (the problem section below), show the shift from chat-selling to a real storefront, name the concrete features that remove each pain point (order tracking, delivery zones, stock alerts, analytics, M-Pesa), then contrast with the alternatives — Jiji and Jumia rent you their audience and their rules; a developer charges Ksh 50,000–130,000 and months of waiting. Close on price and the free trial: “You can have your store live tonight.”

TARGET CUSTOMER

Who it's for — and who it isn't

The sharper we are about this, the better our ads and conversations land. Our north star:

ONE-SENTENCE DEFINITION

DukaNest is for small product sellers — those already selling on WhatsApp, Instagram, Facebook, Jiji or Jumia, **and** entrepreneurs launching their first product business — who want their own affordable, professional online store.

A STRONG FIT

- Fashion, shoes, bags, thrift & boutique sellers
- Cosmetics, beauty and perfume sellers
- Electronics accessories and gadgets
- Home goods and baby products
- Small retail shops going online
- **Entrepreneurs starting out** — a first product line, a side hustle going full-time, a new brand that wants to look real from day one
- 1–3 people, owner-run, under ~200 orders/month
- Existing sellers doing Ksh 20,000–300,000/month
- Comfortable on a smartphone; on social media daily

NOT OUR AUDIENCE

- Large enterprises and supermarkets
- Manufacturers and ERP users
- Developers and agencies
- Dropshipping “gurus”
- Service businesses and restaurants
- People with no product and no plan to sell one

FOR SOMEONE JUST STARTING

Lead with the shortcut, not the pain: “Skip the messy WhatsApp phase entirely. Start with a real store, a proper checkout and M-Pesa from day one — and look established before you even have your tenth customer.” The setup assistant and starter content help a brand-new seller fill the store fast.

WHEN THEY'RE MOST READY TO BUY

Orders are becoming hard to manage · the business is visibly growing · customers are asking “do you have a website?” · they want to look professional · they're ready to scale. Aim messaging at these moments.

THE BELIEF WE HAVE TO BREAK

Almost all of them think “*websites are expensive and complicated.*” Every piece of content should chip away at that — with price, with speed (“live in 20 minutes”), and with “no coding, no developer.”

THE PAIN

The problem we solve

Sellers on WhatsApp and Instagram deal with the same friction every single day. Name it back to them — recognition is what makes them lean in.

- **“Price?” all day.** Typing the same prices over and over, for hours a week.
- **Orders lost in chats.** Someone ordered three days ago — but in which conversation?
- **Delivery-fee arguments.** Working out charges by hand in DMs, then disputing them.
- **No stock visibility.** Selling the last piece twice, then apologising.
- **No trust.** New customers hesitate to send money to just a phone number.
- **No time to grow.** The whole day goes to replying to messages, not finding customers.
- **No numbers.** No idea which products actually make money.

THE TURN

“What if all of that was just... handled? Customers see your prices and pictures on your own site, delivery fees show up automatically at checkout, and every order is recorded for you.”

THE PRODUCT

What DukaNest does

You don't need to memorise every feature. Learn these groups — each one answers a pain point above.

Your branded storefront

A real website with your name, logo, product photos and prices. Mobile-friendly by default. Share the link anywhere.

Order management

Every order recorded automatically — pending, confirmed, delivered — in one dashboard. Nothing lost in a chat.

Delivery zones & fees

Set zones once; customers see the delivery charge for their area at checkout. Fewer disputes.

Stock & inventory

Real-time stock levels and low-stock alerts, so you never oversell.

M-Pesa & card payments

Customers pay through your store via M-Pesa (STK push) or card via Pesapal. Tumizi merchant payments supported.

Analytics

Revenue, best-selling products, traffic, conversion, customer trends — real numbers to make decisions with.

Expense & profit tracking

Log operating costs and cost-of-goods for a clearer profit-and-loss picture.

Content & promotions

Built-in pages, blog, contact forms, and sale/promotion campaigns to drive conversions.

Themes

Choose a ready-made store design (fashion, grocery, modern, multipurpose) and customise branding — no designer.

Built-in store assistant

An AI helper inside the dashboard and app: answers questions about your numbers, adds products and sales for you, writes posts and captions. Full section ↓

Mobile app

Run the store from your phone — products, orders, analytics, and the assistant. Full section ↓

Staff accounts

On the Pro plan, add up to 5 team members with roles and permissions.

Included infrastructure

Hosting, SSL security and platform updates are all part of the subscription — no separate bills.

DON'T OVER-PROMISE

A few things are still rolling out — **custom domains** (stores use a `yourstore.dukanest.com` address for now), automatic M-Pesa payment verification, abandoned-cart recovery and gift cards. If a prospect asks, say “that's on the way” rather than “yes, today.”

THE DIFFERENTIATOR

The built-in store assistant

Every DukaNest store comes with an **AI assistant built into the dashboard and the app** — a chat helper that actually does work in the store, not just a help page. For a solo owner it's like having a part-time shop assistant; for someone starting out it removes the “I don't know where to begin” wall.

WHAT IT DOES FOR THE OWNER

- **Answers questions about their own numbers** — “How many orders this month?”, “What was my revenue last week?”, “How many pairs of shoes did I sell?”
- **Adds things for them** — walks them through adding a product, creates categories, sets up a sale or a delivery zone, right there in the chat.
- **Writes their marketing** — a WhatsApp/Instagram/SMS post about new arrivals, or a full blog article about their products, saved as a draft to review.
- **Gives business suggestions** — what categories a store like theirs should have, roughly what to charge for an item.
- **Tells them what to do next** — “What's left to set up?”, “Am I ready to launch?” — using their real setup checklist.

REAL EXAMPLE PROMPTS (FROM THE PRODUCT)

“What should I do next?” · “How do I add a product?” · “How many orders do I have?” · “Write a social post about my new arrivals” · “Create a sale for my store” · “Write a blog post about caring for my products”

THERE'S ALSO A SETUP ASSISTANT

When a new store is created, DukaNest can generate **starter content** — product descriptions from the facts the owner types in, draft store pages, theme suggestions based on their type of business, and marketing images. The owner reviews and edits everything; nothing goes live on its own. This is what lets a brand-new seller get from empty store to shareable link in one sitting.

HOW TO TALK ABOUT IT

“You're not doing this alone. DukaNest has a built-in assistant — ask it how you're doing, tell it to add a product, or ask it to write your next Instagram post. It's like a shop assistant that works inside your store.” Keep it grounded: it helps you run the store, it doesn't run the business for you, and you approve everything it writes.

Guardrails worth knowing: the assistant only ever reads *that* store's own data, it never publishes anything without the owner clicking confirm, and drafts (sales, blog posts) are saved as drafts. Usage has a monthly

allowance per plan — see the pricing section.

THE PRODUCT

Running the store from a phone

Most of our owners — and most of their shoppers — are on an Android phone. DukaNest is built for that: the whole dashboard works properly on a small screen, and there's a dedicated **DukaNest app for store owners**.

WHAT OWNERS DO FROM THE APP

- **Manage the catalogue** — add and edit products, use the phone camera to shoot product photos on the spot.
- **Handle orders** — see new orders, update statuses, work through fulfilment from anywhere.
- **Check the numbers** — revenue, best-sellers and store analytics in your pocket.
- **Get notified** — push notifications when a new order comes in, so nothing is missed.
- **Use the assistant** — the same built-in store assistant is in the app.

The web dashboard and the app share the same store — change something in one, it's there in the other. The customer-facing storefront is mobile-friendly by default, so shoppers get a clean experience on their phones without any extra work from the owner.

ONE-LINER

“Your shop runs from your phone. Add a product with your camera between customers, get a buzz when an order lands, check today's sales from the matatu home.”

Before running app-download campaigns, check the current Google Play listing status with the team — the owner app is rolling out and a native iOS app and a separate customer-facing app are still on the roadmap, not available yet.

COMPARISON 01

vs. selling with no website (WhatsApp & Instagram only)

This is our biggest opportunity — most prospects aren't choosing between platforms, they just haven't made the jump yet. The pitch is **organisation and trust**, not “quit social media.” They keep WhatsApp and Instagram; DukaNest becomes the store they link to.

What changes the day they start

AREA	WHATSAPP / INSTAGRAM ONLY	WITH DUKANEST
Prices	Answered by hand, 50× a day	▶ Shown on every product, always
Orders	Scattered across chat history	▶ Recorded automatically in one dashboard
Delivery fees	Calculated manually, disputed later	▶ Shown by location at checkout
Stock	In your head	▶ Tracked, with low-stock alerts
Trust	“Send money to this number”	▶ A real branded site with a proper checkout
Your numbers	Guesswork	▶ Revenue, best-sellers, trends, profit
Growth	Capped by how fast you can reply	▶ Customers serve themselves; you scale

ONE-LINER

“Keep your WhatsApp and Instagram. Just give people a real store to buy from instead of a chat to negotiate in.”

COMPARISON 02

vs. Jiji

Jiji is a classifieds marketplace — you post individual listings and buyers contact you to negotiate. It's useful for reach, but it isn't *your* business. DukaNest is the store you own.

Marketplace listing vs. your own store

AREA	Jiji	WITH DUKANEST
Whose brand	Jiji's. You're one listing among thousands	▸ Yours — your name, logo and web address
The buyer	Jiji's lead; contact, then negotiate off-platform	▸ Your customer, with order history and accounts
Checkout	None — chat and arrange payment yourself	▸ Real cart and checkout with M-Pesa built in
Catalogue	Separate listings, each expiring or needing a boost	▸ A permanent, organised catalogue with categories
Competition on the page	Rivals' listings shown right next to yours	▸ Your store — only your products
Costs	Free to list, but you pay to boost/promote for visibility	▸ Flat Ksh 1,000/month, everything included
Trust signal	“I found this guy on Jiji”	▸ “This is their official store”
Operations	No stock, delivery or analytics tools	▸ Stock, delivery zones, analytics, expenses

POSITIONING

“Use Jiji to get found. Send them to your DukaNest store to actually buy — and to come back next time without going through Jiji again.”

COMPARISON 03

vs. Jumia

Jumia is a large marketplace with real logistics reach — but as a third-party seller you live by their commissions, their payout schedule, and their rules. DukaNest trades their audience for your ownership, margin and control.

Third-party seller vs. store owner

AREA	JUMIA (AS A SELLER)	WITH DUKANEST
Commission	A cut of every sale, varying by category	► No per-sale commission — flat monthly fee
Payouts	Paid on Jumia's schedule, after deductions	► Paid straight to you via M-Pesa / your gateway
Pricing power	Pushed to discount; price wars with other sellers	► You set prices; you run your own promotions
Brand & customer	Jumia owns the relationship and the data	► You own the brand, the customer list and the data
Rules	Account can be suspended or penalised by their policy	► Your store, your terms
Storefront	A template product page inside Jumia	► A branded site you design and control
Marketing	Compete for placement inside Jumia	► Drive your own traffic; keep every visitor

POSITIONING

“Jumia rents you their customers and takes a cut of every sale. DukaNest gives you a store where the customer — and the full price — is yours.”

Note: don't quote specific Jumia commission percentages in ads — they change by category and over time. “A cut of every sale” is safe and true.

COMPARISON 04

vs. hiring a developer

Some prospects have priced a custom site. Use their own quote against the wait and the risk.

AREA	CUSTOM DEVELOPER	WITH DUKANEST
Upfront cost	Ksh 50,000–130,000+	► Ksh 1,000/month, 14 days free
Time to launch	Weeks to months	► About 20 minutes
Hosting & SSL	Extra, ongoing, your problem	► Included
Payments setup	Extra integration work	► M-Pesa & Pesapal built in
Maintenance & updates	Call the dev, pay again	► Handled for you
Mobile app	A whole separate project	► Store-owner app included
If something breaks	Depends if the dev picks up	► Support team + Help Center

ONE-LINER

“A developer charges you Ksh 50,000 and three months. DukaNest is Ksh 1,000 and tonight — and it keeps working after launch.”

THE PROOF IT'S EASY**Live in about 20 minutes**

This sequence *is* the counter-argument to “websites are complicated.” Walk prospects through it.

1 Sign up & pick a theme

Register with Google or email, choose your store name and a ready-made design. ~2 minutes.

2 Add your products

Upload photos, set prices, sort into categories — like posting on Instagram, but it's your own store.

3 Set payments & delivery

Connect M-Pesa, set your delivery zones and fees. Done once.

4 Share your link & sell

Put **yourstore.dukanest.com** on WhatsApp, Instagram and Facebook. Customers browse, order and pay through the site.

TOOLS TO POINT PEOPLE TO

The **demo stores** page shows live examples before signing up. The free **14-day trial** needs no credit card.

WHAT IT COSTS

Pricing

Every plan includes a **free 14-day trial**, no credit card, cancel anytime. Prices show in Ksh for Kenyan visitors and USD elsewhere. Hosting, SSL and support are always included.

BASIC — MOST POPULAR

Ksh 1,000 / month

For solo owners, small shops, and entrepreneurs starting out.

- Your own branded store
- Up to 100 products
- Up to 500 orders / month
- Up to 1,000 customers
- 1 staff account
- 5 GB storage · 10 custom pages
- Basic analytics · email support
- Store assistant with a monthly allowance

PRO

Ksh 3,000 / month

For growing stores with a team and more orders.

- Everything in Basic
- Up to 1,000 products
- Up to 5,000 orders / month
- Up to 10,000 customers
- 5 staff accounts with permissions
- 25 GB storage · advanced analytics
- Priority support
- Higher assistant allowance + AI analytics insights

What the AI / assistant allowance means

The built-in assistant and AI content tools have a **monthly allowance** that refreshes each month — enough for normal day-to-day use, with more headroom on Pro. There's also a separate one-time pool for the heavy

lifting when a store is first built, so setting up doesn't eat into the monthly amount.

Indicative monthly allowances — confirm current numbers on the live pricing page

USE	BASIC	PRO
Assistant chats / month	Generous everyday allowance	► Effectively unlimited for real use
AI product descriptions & photo checks	~40 / month	► ~150 / month
AI marketing images	A few per month	► ~20 / month
AI analytics insight summaries	Not included	► Included
One-time setup pool (both plans)	~50 product descriptions, ~50 photo checks, ~15 marketing images, theme & legal-page drafts — for the initial store build	

These AI numbers are the current defaults and are tuned over time. If the store runs out mid-month, normal work is never blocked — only the AI shortcut pauses until the next month or an upgrade. Don't put exact figures in ads; “a monthly allowance, more on Pro” is the safe line.

PRICE FRAMING

“Ksh 1,000 a month is less than you spend on bundles — for a full online store that could multiply your sales.” Compare to a developer's one-off Ksh 50,000+, never to “free” social selling (which costs them hours and lost orders instead). For Pro: “Ksh 3,000 when you've got a team and real volume — still a fraction of one part-time salary.”

Plan limits and pricing are confirmed at signup and can change — always check the live pricing page before quoting figures in a campaign.

Q & A

Handling objections

“I already sell fine on WhatsApp / Instagram.”

“Keep them — DukaNest doesn't replace them. It's the store you send people to, so you stop repeating prices and stop losing orders in chats. You'll still post on Instagram; you'll just link to a real checkout.”

“It's too expensive.”

“It's Ksh 1,000 a month with 14 days free. One or two extra orders a month covers it. A developer would charge you fifty thousand up front for less.”

“I'm not technical.”

“If you can post a product on Instagram, you can run a DukaNest store. Most people are live in about 20 minutes, and there's an app and a support team.”

“Can I use my own domain name?”

“Custom domains are rolling out. For now your store is at yourstore.dukanest.com, which looks clean and professional to share — and you can move to your own domain when it's available.”

“Do customers pay with M-Pesa?”

“Yes — M-Pesa and card (via Pesapal). Customers pay through your store and the money comes to you.”

“What about Jumia / Jiji — isn't that easier?”

“They're good for being found. But you don't own the customer, you compete with everyone else on the page, and Jumia takes a cut of every sale. DukaNest is your store — use the marketplaces to get discovered, then bring people home.”

“I don't really trust AI to run my shop.”

“It doesn't run your shop — you do. The assistant only helps: it answers questions about your own numbers, adds a product when you ask, or drafts a post for you to check. Anything it writes is saved as a draft. Nothing goes live without you tapping confirm. Ignore it completely if you like — the store works the same.”

“I'm just starting — isn't this for people already selling?”

“It's great for both. If you're starting, you skip the messy phase entirely: real store, real checkout, M-Pesa from day one. The assistant helps you fill it fast, and you look established from your very first customer.”

“Is my data / store safe?”

“Yes — hosting and SSL security are included and maintained for you, and each store's data is isolated.”

“What if I want to stop?”

“Cancel anytime; billing just stops. Start with the free trial so there's no risk.”

COPY / PASTE

Ready-to-use lines

Drop these straight into captions, WhatsApp status, DMs and ad copy. Swap in the store name and numbers where it helps.

INSTAGRAM / FACEBOOK CAPTION

Still answering "Price?" in your DMs 40 times a day? Get your own online store with DukaNest – customers browse your products, see delivery fees, and order themselves. From Ksh 1,000/month. 14 days free 🙌 dukanest.com

WHATSAPP STATUS

New: our full catalogue + prices are now on our own website. Tap the link, pick what you want, checkout with M-Pesa. No more back-and-forth 🙌🙌

DM REPLY TO "HOW DO I ORDER?"

Easiest way: open our store 🙌 [yourstore.dukanest.com]. You'll see every product, price and the delivery fee for your area. Add to cart, checkout, pay with M-Pesa. Your order comes straight to us.

AD HOOK – PROBLEM-FIRST

Your business is growing. Your WhatsApp is chaos. Orders lost, prices repeated, delivery fees argued. DukaNest gives you a real online store in 20 minutes – from Ksh 1,000/month.

AD HOOK – VS. DEVELOPER

A developer quoted you Ksh 60,000 for a website? DukaNest is Ksh 1,000 a month, live tonight, hosting and M-Pesa included. Start free for 14 days.

AD HOOK – VS. MARKETPLACE

Selling on Jumia and watching commissions eat your margin? Build a store that's actually yours. DukaNest – your brand, your customers, your full price.

AD HOOK – THE ASSISTANT

Running your shop alone? DukaNest comes with a built-in assistant. Ask it how your sales are doing, tell it to add a product, or ask it to write your next post. From Ksh 1,000/month.

AD HOOK — STARTING OUT

Starting a business? Skip the WhatsApp chaos. Open a real online store with DukaNest — checkout, M-Pesa and delivery zones from day one. Look established before your 10th customer.

AD HOOK — MANAGE FROM PHONE

Add a product with your camera. Get a buzz when an order lands. Check today's sales from anywhere. Your whole shop, in the DukaNest app.

ONE-LINE ELEVATOR

DukaNest gives small Kenyan sellers their own professional online store — M-Pesa, delivery zones, order tracking, a built-in assistant — for about the price of a data bundle.

HOW WE SOUND

Brand voice

Confident, plain-spoken, on the seller's side. We talk like a fellow hustler who figured out a better way — not like software.

DO

- Lead with *their* pain, in their words (“Price?”, lost orders)
- Use concrete numbers: Ksh 1,000, 14 days, 20 minutes
- Say “your own store”, “your brand”, “your customers”
- Keep sentences short. One idea each.
- Name real features (delivery zones, stock alerts, M-Pesa)
- Position marketplaces as discovery, DukaNest as home
- Frame the assistant as a *helper* the owner controls

DON'T

- Say “multi-tenant”, “SaaS”, “platform”, “RLS” — ever, to customers
- Say the AI “runs your store” or “does it all for you” — it assists, the owner decides
- Promise features that are still “coming soon” (iOS app, customer app, custom domains)
- Quote competitors' exact commission or fee figures
- Attack sellers for using WhatsApp — meet them there
- Over-claim scale (“thousands of stores”) without a source
- Sound corporate or apologetic

WORDS THAT CARRY THE BRAND

Your store · your brand · your customers · organised · professional · get found, then bring them home · live tonight · no coding, no developer · less than a bundle.

Internal enablement document — DukaNest sales & marketing. Figures (plan limits, Pro pricing, feature availability) reflect the product at time of writing and should be checked against the live pricing and demo pages before use in paid campaigns.
